SUMMARY

Third-year Artificial Intelligence student at FPT University, focused on practical AI systems: RAG, recommendation, model validation, data pipelines, and deployable web apps. Comfortable with agent-assisted coding workflows such as Pi.dev, using agents for planning, debugging, code review, and documentation while keeping work reviewable.

EDUCATION

- FPT University HCMC - Artificial Intelligence (2024-2027); Year 3 student

CORE SKILLS

AI / ML: RAG, hybrid search, Qdrant, BM25, embeddings, LoRA / QLoRA, model validation, regression

Programming: Python, TypeScript, SQL, FastAPI, Flask, Next.js, React, Pydantic

Data / Infra: PostgreSQL, Redis, Celery, Docker Compose, Hugging Face Hub, DVC, GitHub Actions

Agent Coding: Pi.dev, AI coding agents, prompt-driven debugging, agent-assisted code review, documentation-first workflow

Design: Photoshop, InDesign, Illustrator, visual presentation

HUGGING FACE

- VN_Fashion_data: Dataset snapshot for OutfitMatch; Vietnamese fashion/e-commerce data.
- OutfitMatch LoRA adapters: PEFT/LoRA adapters for stylist experiments on Qwen/Qwen-VL/Gemma variants.

SELECTED PROJECTS

OutfitMatch - AI Fashion Stylist (2026)

Private GitHub + public Hugging Face artifacts | Python • Qdrant • graph retrieval • QLoRA • Qwen/Gemma

- Built the data/knowledge-base path for a Vietnamese fashion recommendation system: catalog scraping, semantic tagging, graph retrieval, quiz reranking, and size suggestions.
- Validated 5,618 catalog items; latest audit reports 0 invalid rows and a graph KB with 4,694 nodes and 316,559 canonical edges.
- Published Hugging Face dataset/model artifacts for OutfitMatch experiments.

RAG Chatbot - Document Q&A (2026)

Public | FastAPI • Next.js • Qdrant • PostgreSQL • Redis • Docker |
https://github.com/vominhnhatquang/MultiAgent_RAG

- Built a document Q&A system with PDF/DOCX/MD/TXT ingestion, hybrid vector + BM25 retrieval, RRF fusion, HyDE, guard checks, and SSE streaming.
- Designed an 8-service container architecture with explicit RAM budget and LLM routing.

ORICAVI Coffee Website (2026)

Private | Next.js 15 • React 19 • TypeScript • Cloudflare • Playwright

- Developed a static-first production website foundation with typed content boundaries, contact API seams, tests, build checks, E2E smoke, and Lighthouse workflow.

Gisdio CMS / Website Admin (2026)

Private | React • Vite • Node.js • Express • RBAC

- Built a CMS/admin dashboard for visual content editing, media/blog workflows, 3-role RBAC, live preview, and static HTML export.

Water Quality Prediction Web App (2026)

Public | Jupyter • scikit-learn • Flask • GridSearchCV |
https://github.com/vominhnhatquang/Predict-Jartest_N_SONG_KN-by-Antigravity

- Created an end-to-end regression pipeline with model comparison, reproducible train/validation/test split, exported model artifacts, Flask API, and responsive UI.
